WORK-RITE HELPER SPRINGS

Firestone Work-Rite load assist springs help level your vehicle when hauling a heavy load or towing a trailer, and won't compromise your ride when empty.

Made from injection-molded microcellular urethane, the Work-Rite springs do not use air so there is no air pressure to monitor. Spacers provide adjustability for individual loading scenarios. Designed for light duty trucks, vans and SUV's, the Work-Rite kits are a no-hole application which means they use the existing holes in the frames for a quick and easy installation. Most kits can be installed with basic hand tools in 30-40 minutes and are vehicle specific for perfect fit and alignment.

Improve your ride, increase stability and reduce sway with a Firestone Work Rite helper spring kit.

- Assist Factory Suspension. Work-Rite load assist springs are installed to the vehicle's frame and axle to help your factory suspension. The factory suspension is NOT modified.
- Reduces Suspension Fatigue. Work Rite helps keep your leaf springs from sagging when hauling a heavy load, or towing a trailer.
- Prevents Bottoming-out. Work Rite creates a protective cushion for your factory suspension, and softens contact between the axle and vehicle frame.
- Easy to Install. Most Firestone Work-Rite suspension kits do not require drilling, and can be installed with simple hand tools in under an hour.
